Overview

The USB-2408 Series are multifunction DAQ devices designed for highly-accurate voltage or temperature measurements. Each device features provides up to 16 single-ended (SE)/8 differential (DIFF) analog inputs, 8 digital I/O, and two counter inputs. The USB-2408-2AO also features two analog outputs.

Each device in the series offers 24-bit resolution for ultra-accurate voltage or thermocouple measurements.

Analog Input

Each device includes 16 SE/8 DIFF analog inputs which you can configure for voltage or TC input on a per-channel basis. Eight software-selectable voltage input ranges are provided. You can configure these ranges on a per-channel basis from ± 10 V to ± 0.078 V.

When measuring TCs, configure analog inputs in DIFF mode. All devices also include open TC detection to identify improperly working thermocouples.

Sample Rate

USB-2408 Series devices can sample analog input channels at up to a 1 kS/s. Refer to the hardware user's guide for information about how noise filtering affects the throughput rate for analog inputs.

Analog Output (USB-2408-2AO only)

The USB-2408-2AO includes two 16-bit analog outputs. Each output has a ± 10 V range. Both outputs can be updated at a rate of up to 500 S/s per channel; one output can be updated at a rate of 1 kS/s.

Digital I/O

Eight digital I/O channels are included with each USB-2408 Series device, and you can read from or write to each individual bit.

Counter Input

Two 32-bit event counters are provided to count TTL pulses at read/write rates of up to 500 Hz. The counters accept inputs of up to 1 MHz.

Calibration

The USB-2408 Series is factory-calibrated using a NIST-traceable calibration process. Specifications are guaranteed for one year.

The USB-2408 Series also supports field calibration for users to calibrate the device locally with the InstaCal utility.
